At Risk Groups

There are insufficient long-term safety data in geriatric patients using SomeGenericDrug to assess the potential risks of cardiovascular disease and cancer. (8.5) 8.1 Pregnancy **Pregnancy Category X** [see Contraindications (4)]: SomeGenericDrug is contraindicated during pregnancy or in women who may become pregnant. SomeGenericDrug is teratogenic and may cause fetal harm. Exposure of a fetus to androgens may result in varying degrees of harm. If this drug is used during pregnancy, or if the patient becomes pregnant while taking this drug, the patient should be made aware of the potential hazard to the fetus. 8.3 Nursing Mothers Although it is not known how much chemical transfers into human milk, SomeGenericDrug is contraindicated in nursing women because of the potential for serious adverse reactions in nursing infants. SomeGenericDrug and other androgens may adversely affect lactation [see Contraindications (4)].

Pregnancy

DANGER: Should not be used by pregnant women

SomeGenericDrug is contraindicated during pregnancy or in women who may become pregnant. SomeGenericDrug is teratogenic and may cause fetal harm. Exposure of a fetus to androgens may result in varying degrees of harm. If this drug is used during pregnancy, or if the patient becomes pregnant while taking this drug, the patient should be made aware of the potential hazard to the fetus.

## About Medicine Explorer

### **Disclaimer: The Medicine Explorer Application is a Beta Research Project Prototype and not for clinical use**

Medicine Explorer is for the general public and clinicians who seek drug information (over the counter and prescription) for making better health decisions. The site uses datasets from openFDA to provide easy access to public data relating to adverse events, product labeling, and recall enforcement reports.

#### General Public Example Use

*You pick up a decongestant from the pharmacy but remember that some may interact negatively with your high blood pressure prescription. With Medicine Explorer, you can easily search for your blood pressure medication and navigate to the drug interaction information and scan the results for interaction with over the counter medications. Also, you can see the potential side effects of the medications to make an informed decision.*

#### Clinician Example Use

*As a doctor, use Medicine Explorer to help decide which over the counter medications would be safe for your patients to take. Through the site, you have the option to view adverse reaction data regarding medications. While reviewing reported issues, you also have the capability to inspect At Risk Population data and see if a drug is safe to prescribe to patients who are pregnant. Allowing you to be assured that the medicine is safe with low risk of complications for your patients.*
